

Computer Science Tutorial — ENS Year 1 — Session 08 (EN)

****Instructor:**** BELACEL Madani

****Level:**** ENS — Year 1 — English Department

****Duration:**** 1h30

Exercise 1 — Parsing a URL

****Statement:**** Break down the URL `https://www.univ-example.dz/cours/tic/chap2.html` (protocol, domain, path).

****Detailed correction:****

- `https://` — secure HTTP protocol.
- `www.univ-example.dz` — domain name (server).
- `/cours/tic/chap2.html` — path to the resource (HTML page).

Exercise 2 — Browsers

****Statement:**** Comparing two browsers (Chrome and Firefox): an advantage and an educational use for each.

****Detailed correction:****

- Chrome: numerous extensions; synchronization Google account.
- Firefox: enhanced privacy; open source development.
- Use: documentary research, Moodle access, online PDF reading.

Exercise 3 — HTTP vs HTTPS

****Statement:**** Why choose HTTPS to connect to the university platform?

****Detailed correction:****

- Encryption of exchanged data (identifiers, notes).
- Server authentication (SSL/TLS certificate).
- Protection against eavesdropping on public network (Wi-Fi).

Exercise 4 — Academic research

****Statement:**** Formulate an advanced query to find articles on “ICT and language teaching” (quotes, operators).

****Detailed correction:****

- `"ICT" AND "language teaching"` (Google academic or institutional engine).
- Filter by date (last 5 years).
- Favor `.edu` domains, university bibliographic bases.

- Note author, title, URL, date of consultation for citation.

Exercise 5 — Web source evaluation

Statement: Evaluate the reliability of an anonymous blog vs. a `.edu` page: 4 criteria.

Detailed correction:

1. **Author** identified and qualified?
2. **Date** of recent publication?
3. **Objectivity** and bibliographic references?
4. **Institutional or commercial domain**?

→ The anonymous blog should be discarded for a university assignment without overlap.

Session progress — 1h30 (90 min)

Phase	Duration	Cumulative total
Welcome	5 mins	5 mins
Exercise 1 — URL analysis	18 mins	23 mins
Exercise 2 — Browsers	15 mins	38 mins
Exercise 3 — HTTP vs HTTPS	15 mins	53 mins
Exercise 4 — Academic research	18 mins	71 mins
Exercise 5 — Reliability of sources	14 mins	85 mins
Correction	5 mins	90 mins
Total	90 mins
