ICT Course 01 — Introduction to Information and Communication Techniques

****Teacher:**** BELACEL Madani

****Module:**** ICT

****Level:**** License 1 — French Department

****Duration:**** 1h30

****Academic year:**** 2025-2026

(Email and detailed progress of the session: see PDF cover page.)

Course Plan

1. Introduction and importance of ICT in the contemporary world
2. Detailed definition of ICT
3. Historical and terminological evolution (NICT → TIC)
4. The three fundamental dimensions of ICT
5. Role and functions of ICT (processing, transmission, backup)
6. Services offered by ICT
7. Application areas with focus on education
8. Digital skills expected in a Language License
9. Conclusion and transition to the next lesson

1. Introduction and Importance of ICT ***(10 min)***

****Information and Communication Technologies**** (ICT) refer to all the digital tools that make it possible to create, process, store, transmit and share information. They include computers, smartphones, wireless networks and online platforms.

****Why this course in License 1?*** From the first year, you use ICT to:

- ****Access resources****: Moodle, digital library, PDF handouts
- ****Communicate****: institutional email, TD forums
- ****Search****: documentary bases, multilingual linguistic corpora
- ****Produce****: Word homework, PowerPoint presentations, lectures

****Educational objective:**** develop a solid ****digital culture**** — knowing how to use the tools, but also understanding their limits (reliability of sources, plagiarism, private life).

2. Detailed Definition of ICT ***(15 min)***

Convergence of three domains

1. ****Computer science**** — automatic processing of information (software, databases)

2. **Telecommunications** — remote transmission (Internet, fiber, Wi-Fi)
3. **Audiovisual and multimedia** — text, image, sound, video combined

Reference definitions

- **ITU:** "ICT encompasses all the tools and systems that make it possible to **manipulate**, **store** and **transmit** information in **digital** form. »
 - **UNESCO:** IT, audiovisual, multimedia, Internet and telecommunications.
 - **In English:** *Information and Communication Technologies* (ICT).
- To remember:** an ICT is a **system** (hardware + software + network) that makes information usable and shareable.

3. Historical and Terminological Evolution (NICT → ICT) *(10 min)*

Period	Term	Meaning
1990–2005	NICT	Emphasis on <i>*newness*</i> : Internet, email, GSM
Since ~2005	TIC / ICT	Commonplace technologies, integrated into everyday life

Related concepts:

- **Digitalization:** conversion into digital files (PDF, MP3, JPEG)
 - **Digital transformation:** reorganization of activities thanks to digital technology
 - **Information society:** information becomes a central resource
- Example:** course on Moodle + recorded video + PDF homework + online correction.

4. The Three Fundamental Dimensions *(15 min)*

1. **Technical dimension** — hardware and software resources (PC, smartphone, Word, browser)
2. **Information dimension** — manipulated content (text, image, sound, video; PDF, DOCX, MP4 formats)
3. **Communication dimension** — exchange between people (email, forum, videoconference)

Mental exercise: for an assignment on Moodle — technique = PC + platform; information = Word file; communication = deposit visible to the teacher.

5. Role and Functions of ICT *(15 min)*

Function	Description	Examples
Treatment	Entry, formatting, calculation	Word, Excel, image editing
Transmission	Remote sending or sharing	Email, Teams, Drive link
Backup	Sustainable conservation	USB key, cloud, university server

Complete scenario: Word writing → sending by email → copying to USB key and cloud. The three functions complement each other.

6. Main ICT Services *(10 min)*

- **Email** (@univ-mosta.dz)
- **Web browsing and search**
- **Videoconference** (Teams, Zoom)
- **Learning platforms** (Moodle, Google Classroom)
- **Online storage and sharing** (Drive, OneDrive)

Distinction: a **service** (Moodle) relies on **technologies** (server, network) for an educational **function**.

7. Applications in Education *(10 min)*

- E-learning and hybrid teaching
- Digital libraries (24-hour access)
- Remote collaborative work
- Online assessment (MCQ, anti-plagiarism)
- Multilingual documentary research

For language students: linguistic corpora, exchanges with native speakers, podcasts, monitoring of reliable sources in the target language.

Issue: multiplying resources requires **critical thinking** (check the source, cite correctly).

8. Expected Digital Skills *(10 min)*

1. Academic office automation (Word, PowerPoint)
2. Documentary research (keywords, credibility of sites)
3. File management (naming, PDF/DOCX formats)
4. Professional communication by email
5. Security and ethics (passwords, plagiarism, privacy)

9. Conclusion *(5 min)*

- ICT = IT, telecoms and multimedia convergence
- Three dimensions: technique, information, communication
- Three functions: processing, transmission, backup
- Essential **transversal** skills

TD 01 (1h30) — application exercises.

Next course: Computer Science and Computer Architecture.
